

Dear FCC:

Request amending the amateur radio licensing structure to earlier licensing structure. Novice would be required to take 5wpm code exam with element 1 exam. Be restricted to CW privileges only on selected portions of HF frequencies. Technician class would be required to take element 2 exam only and have CW privileges on HF frequencies and CW,FM, and SSB privileges on VHF only. General class would be required to take 13 wpm code exam and element 2 exam (technicians licensees would only be required to take 13wpm code exam)and have CW,SSB,and digital on small portions of all HF amateur radio frequencies, VHF, and UHF. Advanced would be required to take element 4A only and be given more amateur radio frequency privileges on HF, VHF, and UHF. Extra class would be required to take 20 wpm code exam along with element 4B and be given all modes of communications available to amateur radio service and frequencies. "Challenge" and hard work is still rewarded and is what has made this nation great.

Thankyou

Bill Eaton WX5G

Houston,TX.
